Steve-

Phase 1 (the actual portal) estimate for Gold King. This is assuming the excavation of 70 feet into the mountain to get to good rock to anchor the portal, and then having to place 70 feet of the steel sets. In actuality, I would be surprised if this goes to more than 40 feet of sets. The mountain will get excavated back, but not the entire length will get steel sets (i.e. there will be an indentation in the mountain at the portal). The dirt and rock is assumed to go on the dump as additional cover.

For San Juan corp.,

Todd C. Hennis, Pres.
